Interview Reflection
J. Berger

What kind of functionality would you need in the application for your department?
- Enter a list of personal data
- Put in appointments
- Data needs to be filled in directly into the database from the application
- All tables need to be linked to all other departments.

Why the text in the table are bold and not bold?

- The text in bold can be seen and adjusted by all departments and the text which that isn't bold that can only be seen and adjusted by the development department

Would you like to fill in the data in the application or in Word?

- All data should be entered in the application
- No data in MS-Word
- Using a central database
- Errormessages when there is a empty field or wrong input

Is there anything you would like to tell us?

- One offer per customer and later maybe more
- No empty records
- Prospect Yes means that the future customer has no contract yet and is only visible for the Sales department
- The Finance department should be able to see which customers are new and or they paid
- Possibility to add, edit or delete a record(customer)
- If there is time left, we can build an andoird application
